

Health and Education

Building a new community at Otterpool Park means giving the people living, working and visiting there everything they need to support them in their daily lives, including a full range of health and education facilities.

Education

- › Our plans include one primary school during the first phase of development. Working with Kent County Council, monitoring and managing the demand for local school places will enable the development to grow the number of schools across the lifespan of the project to a maximum of five primary schools.
- › All primary schools at Otterpool Park will have early years education/nursery on site or very close by.
- › The provision of a secondary school will be demanded with space allowed to build a school at point of need.

Healthcare

- › Health and wellbeing will be embedded within Otterpool Park and this includes providing excellent primary care facilities on site.
- › A state-of-the-art medical centre will provide a 'one-stop shop', including GPs and primary care treatment during the early stages of development. Healthcare services will be delivered in a phased manner according to need.
- › The creation of these facilities on site at Otterpool Park has been planned to reduce pressure on existing local services.
